EDUCATION

Islington College | Kamalpokhari, Kathmandu

Bachelor of Information Technology in Computing

December 2020

• **Relevant Coursework:** Database Designing, Database Modelling, Machine Learning, Software Engineering, Application Development (Java)

ACTIVITIES

Talk | Global AI Bootcamp 2024

Putting AI models into Production

▶ Putting AI models into Production - Mr. Yugant Ghimire - Global AI Bootcamp 2024 Kathmandu

Host | AIML Nepal

▶ Getting into FAANG : Experience Sharing Session by Diksha Gohlyan

AI Unpacked | Youtube channel

▶ OpenAI Swarm changed the game! AI Agentic workflow for the win(100% Automated)

WORK & TECHNICAL EXPERIENCE

Cosmofoil | Sweden (Remote)

Full Stack Core Engineer (AI)

May 2025- Present

- *Full-stack ML platform: Contributed to ML infrastructure with Elixir/Phoenix, Python, PostgreSQL, Clickhouse, and LLM APIs across frontend, backend, data pipelines, and model training.*
- *Infrastructure & DevOps: Worked on cloud infrastructure (AWS/GCP) using Terraform, Docker, and Nix. Supported CI/CD pipelines and deployment workflows.*
- Built data pipelines to make an Agentic SQL Generator for Airlines to do analysis faster.
- Built a secure system avoiding the leakage of Airline information to the LLM.
- Helped scale the application to multiple clients by accelerating the process of UI/UX enhancement along with faster data processing pipelines.

Locmatic Data Pvt. Ltd | Jhamsikhel, Lalitpur

Sr. Data Engineer

November 2024 - January 2025

- Built and optimized scalable data pipelines for LLM workflows using AWS, Azure, MongoDB, Snowflake, and PostgreSQL, ensuring efficient data processing and retrieval.
- Developed web data extraction platforms for market intelligence, deploying and fine-tuning LLMs (OpenAI, LLaMA) for data analysis and enrichment, and implemented batch APIs for efficient data manipulation and information extraction.
- Collaborated cross-functionally to translate business needs into technical solutions, mentor team members, and implement best practices for system performance.

TAI Inc. | Shantinagar, Kathmandu

Project Lead (ML)

June 2023 - November 2024

- Led a team of 6 ML engineers to collaborate with international vendors, including AMBL (AI Research Company in Japan), to successfully build an ML-based search application for Nomura Research Institute.
- Spearheaded the development of CI/CD pipelines for efficient data streaming, processing, and deployment, and contributed to research for AI model training and inference pipelines.
- Optimized Neo4j database queries, achieving a 50x performance improvement, while facilitating weekly knowledge-sharing sessions on the latest AI/ML trends and addressing application performance issues with global teams.

Software Engineer (ML)

August 2022- May 2023

- Set up Apache Kafka to create an efficient data pipeline between ElasticSearch (ES) and Neo4j, and utilized Docker containers to execute Python scripts for client-side tasks.
- Conducted research on state-of-the-art LLMs for the R&D team while working with ElasticSearch and Neo4j to support various client projects.

AIML Nepal | Remote

Core Executive Member

November 2021 – Present

- Facilitated partnerships to secure funding and venues for events, while collaborating with experts to organize and execute successful community initiatives.
- Organized and taught a month-long ML Bootcamp for 5 selected participants, contributing to community management and ensuring smooth operations within the core team.

Web&Apps Pvt.Ltd | Remote

Junior AI Developer

November 2021- June 2022

- Researched and fine-tuned GPT-J on client data to create a custom AI chatbot solution, leveraging AWS tools for deployment.
- Conducted web scraping using Selenium and BeautifulSoup to prepare datasets for model training.
- Developed production-level APIs with FastAPI, initiated weekly paper reading sessions, and gained hands-on experience with production code.

Leapfrog Technology Inc. | Charkhal, Kathmandu

Machine Learning Intern

August 2021- September 2021

- Developed end-to-end machine learning projects involving text processing, model evaluation, and the use of libraries like Pandas, Numpy, and Matplotlib; collaborated with cross-functional teams using version control tools.
- Gained proficiency in KPIs and metrics for model evaluation, while ensuring proper code structure, documentation, and delivery of fully-functional ML projects.

RELEVANT PROJECTS

suave.ai

February 2024- August 2024

<https://github.com/yugant10-commits/chat-web/tree/dev>

- Built an LLM-powered RAG system for extracting relevant, cited information from a user's knowledge base.
- Integrated an open-source vector database to store and manage client-scraped data.

- Optimized retrieval with vector search and advanced reranking for improved response accuracy.
- Implemented the solution presented in the [gzip+knn](#) paper to compare better answer retrieval techniques.

TECHNICAL SKILLS

Languages: Python (Advanced), Java (Basics), SQL (Intermediate)

Skills: Data Analysis (Intermediate), Data Visualization (Intermediate), Machine Learning (Intermediate), Deep Learning (Intermediate)

Software: Oracle SQL Developer and Data Modeler (Basics), MongoDB (Basics), Android Studio (Intermediate), Google Collaboratory (Advanced), Neo4j(Intermediate), Elasticsearch(Intermediate), Apache Kafka(Intermediate), GIT (Intermediate), Metabase (Basic)
